INGREDIENTS

Ascorbic Acid, Vitamin A, Vitamin D-3, Niacin, Vitamin B-12, Vitamin E, Riboflavin, lysine Ferrous Carbonate, Iron Proteinate, Calcium Proteinate, Zinc Proteinate, Cobalt Proteinate, Ethoxiquin (preservative), Calcium Carbonate, Magnesium Oxide, Sodium Bicarbonate, Salt, Manganous Oxide, Copper Sulfate, EDDI, Magnesium Proteinate, Manganese Proteinate, Copper Proteinate dried yeast culture and Mineral oil.

Recommended Use:

EARLY OVUM PLUS PROGRAM

Add 2 lbs. of OVUM PLUS per ton to your complete feed when new pullets are housed (18 - 21 weeks of age) and continue for 5 weeks. Stop. Then at 46 weeks of age, add 2 lbs. OVUM PLUS per ton until the end of lay. This Early OVUM PLUS program helps pullets come into production with extra nutrients.

PREVENTIVE PROGRAM

Prior to an anticipated eggshell problem, or when the hens have reached 4 to 5 months of lay, add 2 lbs. OVUM PLUS per ton of complete ration, and feed to end of lay. Just add OVUM PLUS, no other ration changes are necessary.

TREATMENT PROGRAM

When a shell problem has developed, add 8 lbs. OVUM PLUS per ton for one week, then 4 lbs. per ton for one week, then 2 lbs. per ton until end of lay.

MOLTED BIRDS

When birds have reached 50% production, add 2 lbs. OVUM PLUS per ton of complete ration, and continue feeding until end of lay.

Technology**

*"A Dynamic Approach to Nutri-Agri Product
Research and Technology Development"*

WHAT IS Ovum Plus ?

- ◆ OVUM PLUS is a nutrient supplement for older laying hens.
- ◆ OVUM PLUS is a unique combination of soluble trace minerals and vitamins. OVUM PLUS may provide the extra nutrients that older hens need for egg shell formation.
- ◆ OVUM PLUS success story is that it gets the trace minerals and vitamins to the hen and helps her with shell formation.
- ◆ OVUM PLUS is a convenience package. It lets you add extra nutrients, without reformulation, to help older hens until shell formation.
- ◆ OVUM PLUS is a non-medicated product.

OVUM PLUS IS NOT A CALCIUM PRODUCT

NO CHANGES ARE REQUIRED IN FORMULATION, not even calcium. If the hens are consuming between 3.5 and 4.5 grams of calcium per day, OVUM PLUS can be added to the rations without formulation changes.

DOES IT PAY?

One ton of OVUM PLUS will feed 2,500.00 birds for approximately five months, at 2 lbs. per ton continuously.

If OVUM PLUS gets an extra egg in 5 months lay, it pays.

OVUM PLUS can be used on older hens of any species. OVUM PLUS has been used on broiler breeders, turkey breeders, pheasants, and quail.

Every egg producer sooner or later may experience a shell quality problem. Thin, weak, rough, and poor textured shells cause a great economic loss. Shell quality problems usually occur as the hen becomes older. It is thought that older hens do not absorb the nutrients needed for shell formation as well as younger hens. Hence, older hens respond to supplemental feeding of nutrients to improve shell quality. OVUM PLUS can be mixed in the feed to help reduce losses from under-grades and cracks.

WHAT RESULTS CAN YOU EXPECT?

The proof of any product is in its performance in the field. OVUM PLUS has proven itself around the world. Producers tell us you can expect better shells, save more lost eggs and reduce mortality by up to 4%.

Give OVUM PLUS a chance to help you with your shell quality problems. You will be glad you did. It is convenient and simple.

Ovum Plus

WILL YOU BENEFIT BY

- Six to twelve more eggs per layer?
- Four + hatching eggs per breeder hen ?
- Saving "lost eggs"(2% less cracks?)
- Reducing mortality up to 4%?
- Having better shells & better grades?
- Helping stressed older hens do better?
- Improved molting results?
- A 5 to 1 return for your investment?
